Voorwoord

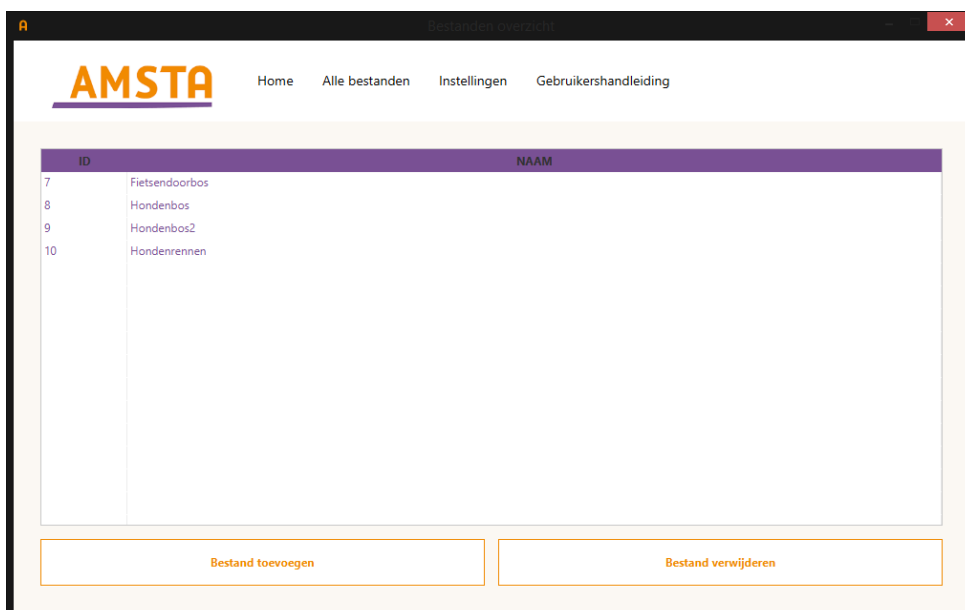

This is the User Manual from AMSTA Team 05. In this manual we explain all the buttons. This manual is in English so that the English users can also use this application. There are two pages in this application. From each page there are screens below.

There are three options in the menu. If you click one of the first three buttons you will get another page. At the first button you will go to the home page (Fig. 1). With the second button, you go to the page where you see all the files in the database (Fig. 2). If you click the last menu button, this user manual will open.

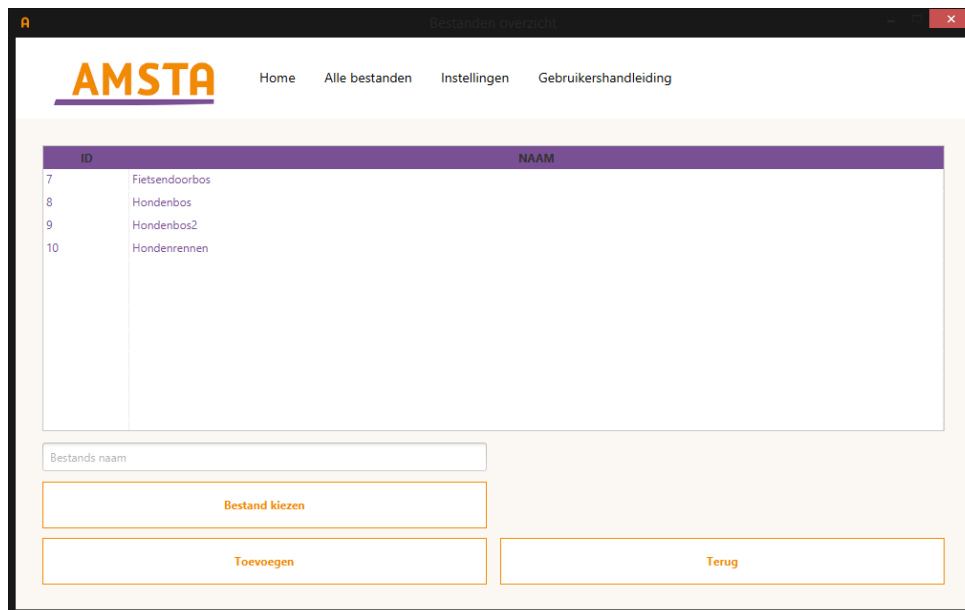

(Figure 1)

At the bottom of this page there are a total of 4 buttons and 1 slider. The most left button is the pause and play button. The Second to left button is the skip button. This button skips to the next video. The third button is to stop the video completely. The most right button is the fullscreen button. This button can change the video to fullscreen mode. The slider can change the volume. If you move it to the left you'll increase the volume. Move it to the right and you'll decrease the volume.

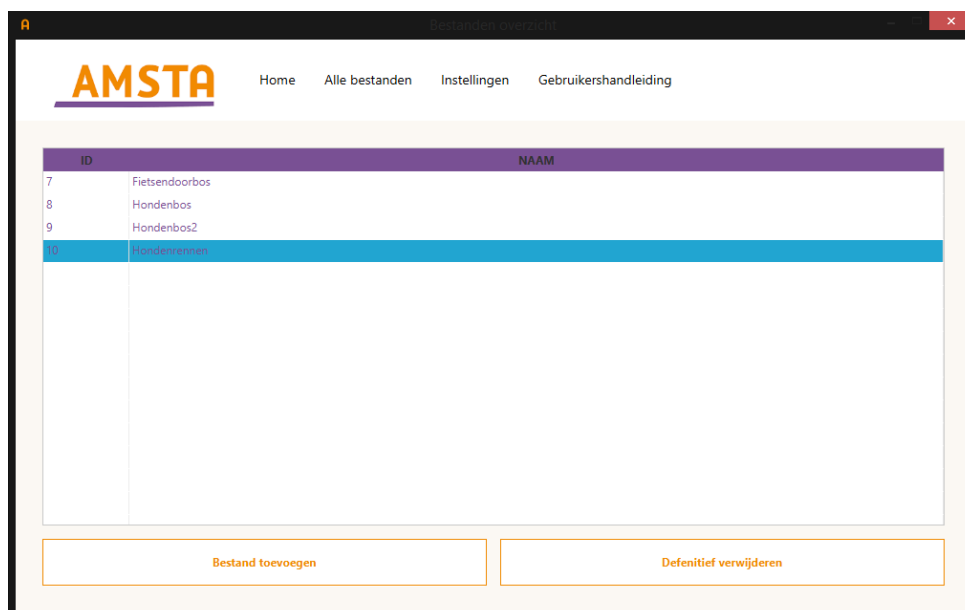

(Figure 2)

The table on this page contains all the files that can be played. At the bottom of this page there are 2 buttons. The left button will bring you to the page on image 3. The right button will bring you to the page on image 4.

(Figure 3)

On this page the table with files is still visible. but now you can add new files. , by entering a name in the text field and selecting a file. you then push the “file select” button. When you selected a file and given it a name you can push the “Add” button to add the file to the database. If you want to go back to the previous page you have to push the “Back” button.

(Figure 4)

When there is a row selected in the table and the “Delete file” button is pushed the button changes to “Definitive Delete”. The selected row only gets deleted when the new button is pushed.
